*Iodizyme-HP™* (product # 1737)

## High Potency Iodine Supplement Supplying Elemental Iodine and Iodide

Iodine is an essential trace mineral necessary for the production of thyroxine (T4). Although approximately 80% of the dietary intake of iodine is sequestered by the thyroid gland, other tissues concentrate iodine as well. They include salivary glands, gastric mucosa, mammary glands, ovaries and the choroid plexus.

However, iodine is often found lacking in the typical Western diet. Consequently, as a result of decreased iodine status, sufficient thyroxine cannot be produced, negatively impacting thyroid function. The use of oral iodine/iodide can aid in circumventing this issue.

Each ½ tablet serving of **Iodizyme-HP™** supplies:

Total Iodine/Iodide	6.25 mg
Iodine	2.5 mg
Iodide	3.75 mg

**Recommendation:** One half (½) tablet each day as a dietary supplement or as otherwise directed by your healthcare professional.

Each bottle of **Iodizyme-HP™** contains 120 tablets (providing 240 servings of ½ tablet)

**NOTE :** *Iodizyme-HP™* will only be made available through healthcare professionals licensed to diagnose and treat, and therefore have the ability to order laboratory testing in order to evaluate and monitor their patients' iodine status.

To place your order for **Iodizyme-HP™** or for additional information contact us:
